

Department of the Navy, DoD

§ 707.12

§ 707.10 Wake illumination light.

Naval vessels may display a white spot light located near the stern to illuminate the wake.

§ 707.11 Flight operations lights.

Naval vessels engaged in night flight operations may display various arrangements of light systems containing combinations of different colored lights as a means of assisting in the launch and recovery of aircraft and enhancing flight safety. These light systems will be located at various points on the vessels, depending on the

vessel type and the nature of the flight operations being conducted.

§ 707.12 Amphibious operations lights.

Naval vessels engaged in night amphibious operations may display various arrangements of light systems containing combinations of different colored lights as a means of assisting in the launch and recovery of assault craft and enhancing the safety of the amphibious operation. These light systems will be located at various points on the vessel, depending on the vessel type and the nature of the amphibious operations being conducted.
